High quality straight beans, 5-8" long, are produced in abundance on 18" tall plants. Does well growing in a range of conditions.

**SOW** in average soil in full sun after danger of frost, spring to early summer. In rows 18-30" apart, sow seeds about 3" apart and cover with 2" of fine soil. Firm lightly and keep evenly moist. Seedlings emerge in 7-14 days. Thin to stand about 6" apart when seedlings are 1-2" tall.

**SEMBRAR** en tierra común, a pleno sol, después de que pase el peligro de helada, desde la primavera hasta principios del verano. En hileras, a una distancia de 45,7-76,2 cm, sembrar las semillas con una separación de aproximadamente 7,6 cm y cubrir con 5,1 cm de tierra de buena calidad. Apisonar suavemente y mantener la humedad en forma pareja. Las plántulas aparecen a los 7-14 días.

## BURPEE® SWEET CORN

Early & Often Hybrid®  
MAÍZ DULCE Early & Often Hybrid

Sweet tasting, 7-8" ears. Some mature early and others continue to mature throughout the season. Harvest in about 64 days.

**SOW** in fertile soil in full sun after all danger of frost and soil has warmed thoroughly. Sow 6-10" apart in rows 2-3' apart, in blocks of at least 4 rows side by side rather than in one long row. This ensures pollination and full ear development. Cover with 2" of fine soil. Seedlings emerge in 7-14 days.

**SIEMBRE** en suelo de jardín fértil a pleno sol, una vez pasado todo el peligro de heladas y que el suelo se haya calentado por completo. Siembre con una separación de 15,2 a 25,4 cm en filas con una separación de 61 a 91,4 cm, en bloques de al menos 4 filas lado a lado en lugar de una fila larga. Esto asegura la polinización y el crecimiento completo de la mazorca. Cubra con una capa de tierra fina de 5,1 cm. Las plántulas emergen en 7 a 14 días.

|------------------------|
| April - June           |
| Mar - Apr & July - Aug |
| Feb - Mar & Aug - Sept |
| September - April      |

Sow in row directly outdoors as soon as ground can be worked. Place one seed every 2 inches and cover with soil. Cool weather vegetable.

When plants are about 3 inches tall, thin to 6 inches apart. Use thinnings in salads. Harvest before flower stalk forms.

Packed for  
 Season:

**SUGGESTIONS:**

Harvest entire plants at soil line when outer leaves are 6 inches long or just cut away outer leaves as needed for continuous crop until hot weather. Sow again in late summer.

A good yielder all summer and into the fall. The tender sweet rhubarb-like stalks are ruby-red. The bright color extends into the leaf veins of the dark-green heavily crumpled leaves. Delicious in salads or cooked. Very ornamental plants are 18-24 inches. This packet will plant approximately a 45 foot row.

### Planting Instructions:

1.

Sow in outdoor row as soon as ground can be worked. Place one seed every 3 inches and cover firmly with soil. Prefers full sun.

2.

Thin to 6 inches apart when plants are 3 inches tall. Use thinnings as fresh greens. Keep plants heavily mulched and moist.

May - June  
April - July  
March-May & August  
Feb-May & Aug-Sept

| Days to Germination | Days to Harvest | Planting Depth | Spacing Row/ Plant | Preserve by        |
