1. Convert the following to radian angle measures; leave your answer in terms of π , simplify all fractions.

3 a.
$$270^{\circ}$$
 $\frac{270}{1} \cdot \frac{\pi}{180} = \frac{377}{2}$
 $\frac{\pi}{2}$
b. 225°

c.
$$67^{\circ}$$

$$\frac{67}{180} = \frac{6717}{180}$$

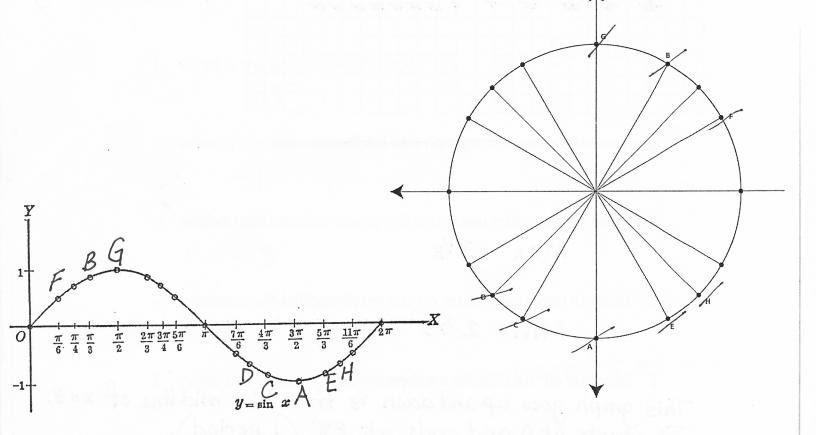

a.
$$\frac{\pi}{4}$$
 45°

c.
$$\frac{\pi}{3}$$
 60°

$$d. -\frac{7\pi}{6}$$

$$-\frac{7\pi}{6}, \frac{180}{47} = 2/0$$

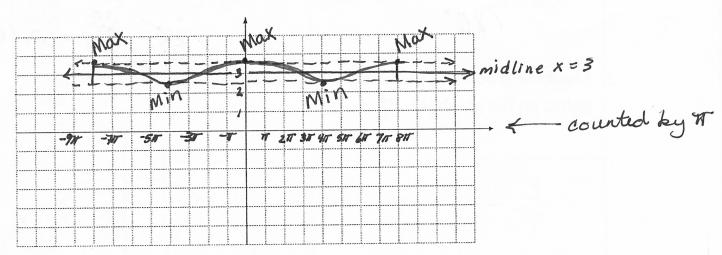

3. Match each point on the unit circle to a point on the graph. Label the points on the graph (A – H).

4. Use the equation below to answer the following questions.

$$y = \frac{1}{3}\cos\left(\frac{1}{4}x\right) + 3$$

- a. Determine the amplitude of the function. How is it related to the
- equation? 1/3 The graph goes up 1/3 and down 1/3 b. Determine the period of the function. How is it related to the equation? $P = \frac{2\pi}{14} = 2\pi \cdot 4 = 8\pi$ It takes 8π to draw lossine curve. c. Determine the midline of the function. How is it related to the
- equation? X = 3 This is the horizontal line through the Find the domain of the function.
- d. Find the domain of the function.
- e. Find the range of the function. [2 2/3, 3 /3]
- f. Graph at least 2 cycles of the function.

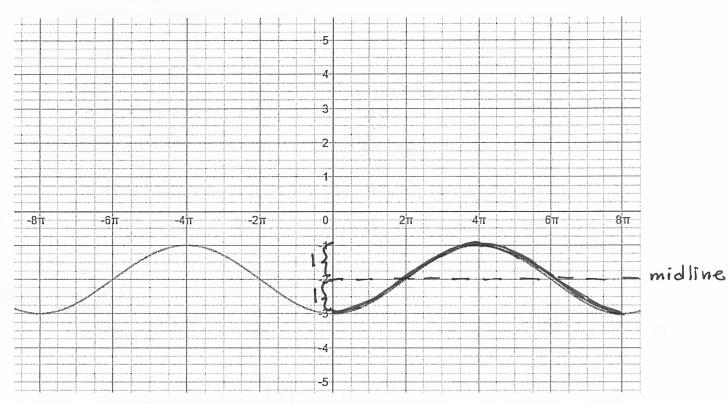

- g. Mark all zeros on the graph and list them below.
- h. Mark all maximum values on the graph and list them below.

Mark all minimum values on the graph and list them below.

j. Describe all the transformations from $y = \cos(x)$ This graph goes up and down 13 from the midline of x=3. It starts at 0 and ends at 847 (1 period).

5. Use the graph below to answer the following questions.

a. Trace or highlight one cycle on the graph.

b. What is the period of the graph?

c. What is the maximum?

d. What is the minimum?

e. What is the amplitude?

 $y = -1 \cos(\frac{1}{4}x) - 2$ f. Write the equation of the graph.

1. Convert the following to radian angle measures; leave your answer in terms of π , simplify all fractions.

$$\frac{3}{270} \cdot \frac{1}{180} = \frac{317}{2}$$

c.
$$67^{\circ}$$

$$\frac{67}{1}, \frac{\pi}{180} = \frac{67\pi}{180}$$

$$\frac{\text{d. }359^{\circ}}{359} \cdot \frac{97}{180^{\circ}} = \frac{35997}{180}$$

2. Convert the following to degrees, round to the nearest tenth of a degree.

a.
$$\frac{\pi}{4}$$
 45°

c.
$$\frac{\pi}{3}$$
 60°

$$d. -\frac{7\pi}{6}$$

$$-\frac{7\pi}{6}, \frac{180}{\pi} = 210^{\circ}$$

3. Match each point on the unit circle to a point on the graph. Label the points on the graph (A - H).
