

Equations of circles

Section P.2

--17 .

- A circle is the set of points in a plane at a fixed distance (radius) from a fixed point (center).

- The standard form equation of a circle is: $(x - r)^2 + (y - k)^2 = \underline{r^2}$

Center (r,k) radius r

- Example: $(x - 2)^2 + (y - 3)^2 = 25$ $(2, 3)$ $r = 5$
- $(x + 2)^2 + (y + 3)^2 = 25$ $(-2, -3)$ $r = 5$
- $(x + 5)^2 + (y - 7)^2 = 16$ $(-5, 7)$ $r = 4$
