

Trig-Precalculus Quiz 4.1-4.2 Review

ALL SUPPORTING WORK MUST BE SHOWN TO RECEIVE FULL CREDIT

Solve the problem.

- 1) From a distance of 1201 feet from a spotlight, the angle of elevation to a cloud base is 40° . Find the height of the cloud base to the nearest foot.
- 2) A wheel with a 36-inch radius is marked at two points on the rim. The distance between the marks along the wheel is found to be 3 inches. What is the angle (to the nearest tenth of a degree) between the radii to the two marks?

Solve the equation.

3) Solve $\sin \theta = \frac{\sqrt{3}}{2}$ for θ , where $0 \leq \theta \leq \frac{\pi}{2}$.

4) Solve $\cot \theta = \sqrt{3}$ for θ , where $0^\circ \leq \theta \leq 90^\circ$

Solve for x . Round your answer to 2 decimal places.

5)

Use the arc length formula and the given information to find the indicated quantity.

6) $s = 6.9$ ft, $\theta = \frac{\pi}{6}$ rad; find r

7) $s = 10$ cm, $\theta = 30^\circ$; find r

Give the exact value.

8) $\sin 60^\circ$

9) $\csc \frac{\pi}{4}$

Convert from degrees to radians. ~~Use the value of π found on a calculator and round answers to four decimal places, as needed.~~

10) 570°

Convert the angle to degrees, minutes, and seconds.

11) 63.98°

Convert the radian measure to degree measure. ~~Use the value of π found on a calculator and round answers to two decimal places.~~

12) $\frac{9\pi}{4}$

Find the exact values of the indicated trigonometric functions. Write fractions in lowest terms.

13)

Find $\cos B$ and $\cot B$.

Convert the angle to decimal degrees and round to the nearest hundredth of a degree.

14) $160^{\circ}33'21''$

Assume that θ is an acute angle in a right triangle satisfying the given conditions. Evaluate the indicated trigonometric function.

15) $\sec \theta = \frac{5}{4}$; $\sin \theta$

- 1) 1008 feet
- 2) 4.8°
- 3) $\frac{3}{\pi}$
- 4) 30°
- 5) 21.76
- 6) $\frac{41.4}{\pi}$ ft
- 7) $\frac{60}{\pi}$ cm
- 8) $\frac{2}{\sqrt{3}}$
- 9) $\sqrt{2}$
- 10) $\frac{6}{19\pi}$
- 11) $63^{\circ}58'48''$
- 12) 405°
- 13) $\cos B = \frac{41}{40}$; $\cot B = \frac{9}{40}$
- 14) 160.56
- 15) $\frac{5}{3}$
