

Solve each system of equations algebraically.

$$1) \begin{aligned} y &= -x^2 + 1 \\ y &= -2x + 2 \end{aligned}$$

$$2) \begin{aligned} x^2 + y &= 5 \\ -y &= x - 3 \end{aligned}$$

3)

$$\begin{aligned} y &= x^2 + 5x - 10 \\ y &= 2x + 18 \end{aligned}$$

$$4) \begin{aligned} y &= 27 - x^2 \\ y &= 2x^2 \end{aligned}$$

$$5) \begin{aligned} y &= x^2 + 4x - 2 \\ y &= 6x - 3 \end{aligned}$$
