Why do we learn this? To order fractions and to add and subtract fractions. To rename fractions.

$$\left(\frac{6}{6}\right) \frac{6}{30} \square \frac{7}{36} \left(\frac{5}{5}\right) \leftarrow \begin{array}{l} \text{multiply times} \\ \text{another form} \\ \text{of 1.} \end{array}$$

$$\frac{36}{180} > \frac{35}{36}$$
