

Mass, Volume, or Density?

Density = 2 g/ml Volume = 25.0 ml $m = D \times V$ $m = 2 \text{ g/ml} \times 25 \text{ ml}$ $m = 50 \text{ g}$	Example	Density = 6 g/ml Volume = 42 ml	1	Mass = 4 grams Density = 2 g/ml	2
Mass = 18 grams Density = 12 g/ml	3	Density = 1.0 g/ml Volume = 3 ml	4	Density = 5 g/ml Volume = 45 ml	5
Mass = 12 grams Volume = 13 ml	6	Mass = 12 grams Volume = 16 ml	7	Mass = 12 grams Volume = 17 ml	8
Mass = 24.1 grams Density = 12.4 g/ml	9	Mass = 24.5 grams Density = 22 g/ml	10	Density = 6.2 g/ml Volume = 12.4 ml	11
