Show division using an array.	Show division using an area model.
<p>1. <math>24 \div 4</math></p>  <p>Quotient = <u>6</u></p> <p>Remainder = <u>0</u></p>	 <p>Can you show <math>24 \div 4</math> with one rectangle? <u>Yes</u></p>
<p>2. <math>25 \div 4</math></p>  <p>Quotient = <u>6</u></p> <p>Remainder = <u>1</u></p>	 <p>Can you show <math>25 \div 4</math> with one rectangle? <u>No</u></p> <p>Explain how you showed the remainder:</p> <p>I outlined one more square unit.</p>

Solve using an array and area model. The first one is done for you.

Example:  $25 \div 3$

Quotient = 8    Remainder = 1

3.  $44 \div 7$

Quotient = 6    Remainder = 2

4.  $34 \div 6$

Quotient = 5    Remainder = 4

5.  $37 \div 6$

Quotient = 6    Remainder = 1

6.  $46 \div 8$

Quotient = 5    Remainder = 6
