

Name _____

Date _____

1. Solve $35 \div 2$ using an area model. Use long division and the distributive property to record your work.

$$20 \div 2 + 14 \div 2$$

$$= 10 + 7$$

$$= 17$$

$$(17 \times 2) + 1 = 35$$

$$\begin{array}{r} 17 \text{ R } 1 \\ 2 \overline{) 35} \\ \underline{-2} \\ 15 \\ \underline{-14} \\ 1 \end{array}$$

2. Solve $79 \div 3$ using an area model. Use long division and the distributive property to record your work.

$$60 \div 3 + 18 \div 3$$

$$= 20 + 6$$

$$= 26$$

$$(26 \times 3) + 1 = 79$$

$$\begin{array}{r} 26 \text{ R } 1 \\ 3 \overline{) 79} \\ \underline{-6} \\ 19 \\ \underline{-18} \\ 1 \end{array}$$

3. Paulina solved the following division problem by drawing an area model.

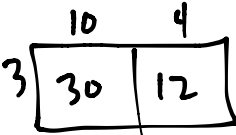

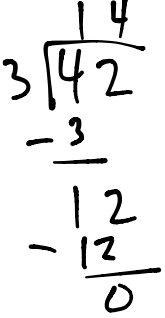

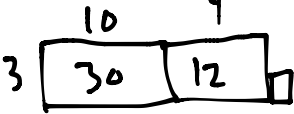

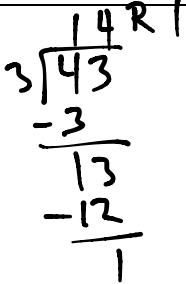

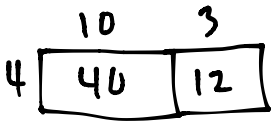

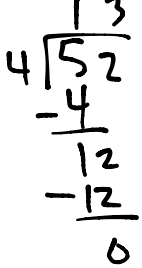

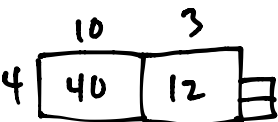

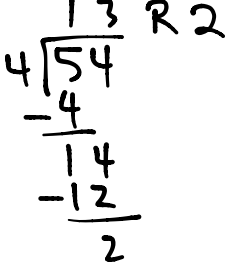

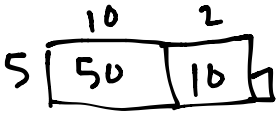

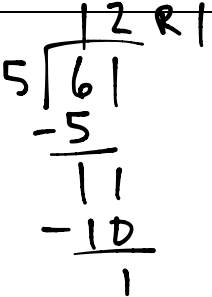

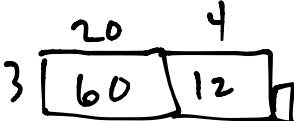

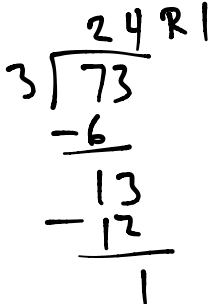

a. What division problem did she solve?

$$98 \div 4$$

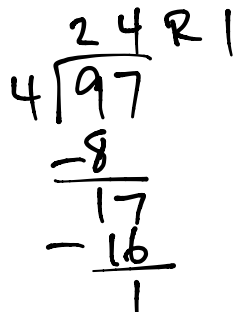

b. Show how Paulina's model can be represented using the distributive property.

$$\begin{aligned} &\rightarrow 40 \div 4 + 40 \div 4 + 16 \div 4 \\ &= 10 + 10 + 4 \\ &= 24 \\ &(24 \times 4) + 2 = 98 \end{aligned}$$

Solve the following problems using the area model. Support the area model with long division or the distributive property.

<p>4. $42 \div 3$</p>  	<p>5. $43 \div 3$</p>  
<p>6. $52 \div 4$</p>  	<p>7. $54 \div 4$</p>  
<p>8. $61 \div 5$</p>  	<p>9. $73 \div 3$</p>  

10. Ninety-seven lunch trays were placed equally in 4 stacks. How many lunch trays were in each stack? How many lunch trays will be leftover?

There are 24 trays in each stack.
There is 1 tray left over.
