1. Write both a Sine and Cosine equation for this function:

Graph one period of each. Label the coordinates of the Max, Min, and points on the midline.

$$2. \ y = 6\sin\left(\frac{8x}{9}\right)$$

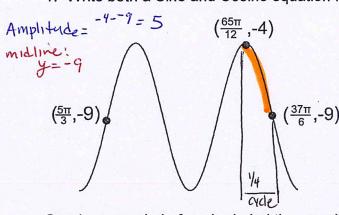

3.
$$y = -13\cos(10(x + \frac{7\pi}{4})) - 8$$

4. Given $\tan = \frac{-\sqrt{3}}{3}$ and $\cos \theta > 0$, find θ such that $0^{\circ} \le \theta \le 360^{\circ}$.

5. A 70 foot long rope is attached to the bottom of a window of an apartment building. The rope is pulled tight and anchored to a stake in the ground. If the stake is 55 feet from the apartment building find the angle the rope makes with the building to nearest tenth of a degree.
