

Refer to the Figure for questions 6 - 11.

6. Name ALL the planes. (6 pt)

7. Name three collinear points. (2 pt)

M, S, X

8. Are points N, S, R, and W coplanar? Why? (2 pt)

NO, W is not in the same plane points it contains

9. What is another way to name Plane A? (2 pt)

Plane points it contains

10. Where do \overleftrightarrow{QR} and \overleftrightarrow{SR} intersect? (2 pt)

R

11. Name two lines or segments and their intersections (other than question 10). (3 pt)

SR QR R RN PN N

Match each of the pictures on the left to the correct label on the right.

Homework
Answers

A. \overleftrightarrow{AB}

B. Line a

C. Point B

D. \overleftrightarrow{AB}

E. Point A

F. \overleftrightarrow{AB}

7. What is another way to name #3 from above?

BA if flip letters

8. What is another way to name #5 from above?

BA; flip letters

9. Why is there no other name for #2 above?

B/c it goes in one direction

10. Describe the 2 ways to name a line.

Write "line" with arrow

11. Describe how to name a ray.

start end pt

12. Describe how to name a segment.

line using endpoints

The two lines above intersect at a point

The two lines above are \parallel which means they don't intersect

The two lines above are \perp which means they form a right angle 90°

Using the figure above, answer the following questions. Make sure you use appropriate symbols and capital letters when needed.

13. Name three lines. \overleftrightarrow{AH} \overleftrightarrow{FE} \overleftrightarrow{IC}	14. Name three line segments. \overline{BC} \overline{CD} \overline{BD}
15. Name three rays. \overrightarrow{BA} \overrightarrow{CF} \overrightarrow{CB} \overrightarrow{CD}	16. Name an angle with vertex C. $\angle ICE$ Name an angle with vertex B. $\angle ABE$
17. Which two lines intersect at B? \overleftrightarrow{AB} and \overleftrightarrow{FE} intersect at point B	18. Name all points collinear with F. B, C, D Name a point that is NOT collinear with B and D. G

Protractor -- what is it?

Based on Google definitions, a **protractor** is an instrument for measuring angles, typically in the form of a flat semi-circle with degrees along the curved edge.

What is an angle?

The space (usually measured in degrees) between two intersecting lines or surfaces at or close to the point where they meet.

Protractor Exploration Activity --

With your table partner:

- Complete the activity sheet on measuring angles & creating angles with a protractor.

Two Ways to Classify Triangles

- By their sides
- By their angles

Classifying Triangles By Their Sides

- Scalene
- Isosceles
- Equilateral

Scalene Triangles

- No sides are the same length

Isosceles Triangles

- At least two sides are the same length

Classifying Triangles By Their Angles

- Acute
- Right
- Obtuse

Acute Triangles

- Acute triangles have *three* acute angles

Right Triangles

- Right triangles have one right angle

Obtuse Triangles

- Obtuse triangles have one obtuse angle

Classify this triangle.

Right Scalene

Classify this triangle.

Obtuse Isosceles

Classify this triangle.

Acute Scalene

Classify this triangle.

Obtuse Scalene

Classify this triangle.

Right Isosceles
