

Describe harmful effects of humans on the environment.	
Describe helpful effects of humans on the environment.	
Describe ways humans are extending resources.	
Describe ways humans are protecting resources.	
Describe ways humans are restoring resources.	

Humans hurt the environment by polluting the land, air and water with factories, cars and garbage.

Humans can help the environment by planting trees, cleaning up water and trash in the environment.

Reducing the amount of resources we use helps us extend how much we will have. If we conserve or use less water, this resource will last longer.

We can protect resources by caring for our environment, stopping deforestation, protecting endangered animals.

When we recycle we are restoring resources rather than putting them in a landfill. Paper, metal, glass, and some plastics can be recycled.
