

Graphically

Example 1:

$$\begin{array}{r} 2x - y = 4 \\ -2x \quad -2x \end{array}$$

$$y = \frac{1}{3}x + 1$$

$$\begin{array}{r} -y = 4 - 2x \\ -1 \quad -1 \\ y = -4 + 2x \end{array}$$

Solution:
(3, 2)
One solution
