

3.7.16

Put the appropriate markings on the square below. Find the area and the perimeter.

$$A = S^2 \quad P = 4S$$

$$A = (10.9)^2 \quad P = 4(10.9)$$

$$A = 118.81 \text{ cm}^2 \quad P = 43.6 \text{ cm}$$

Put the appropriate markings on the square below. The area of the square is 21.16 cm^2 . Find the length of the sides and the perimeter.

$$A = 21.16 \text{ cm}^2 \quad l = ? \quad P = ?$$

$$A = S^2 \quad l = 4.6 \text{ cm}$$

$$\sqrt{21.16} = S$$

$$4.6 \text{ cm} = S$$

$$P = 4S$$

$$P = 4(4.6) \quad P = 18.4 \text{ cm}$$
