

3.10.16

1. Put the appropriate markings on the square below. Find the area and the perimeter.

$$A = s^2 \quad A = (5.7)^2$$

$$\text{Area} = 32.49 \text{ yd}^2$$

$$P = 4s \quad P = 4(5.7)$$

$$\text{Perimeter} = 22.8 \text{ yd}$$

5.7 yd.

2. Put the appropriate markings on the square below. The perimeter of the square is 112 m. Find the length of the sides and the area.

$$A = s^2 \quad P = 4s \quad P = 112 \text{ m}$$

$$A = 28^2 \quad \frac{112 = 4s}{4 \quad 4} \quad \frac{112}{4} = 28$$

$$A = 784 \text{ m}^2 \quad s = 28 \text{ m}$$
