

SCIENTISTS FIND BLACK HOLE

An Illustration Showing a Newly Discovered Black Hole

Scientists called astronomers found a black hole in space. A black hole is a unique area in space nothing can escape, including light, dust and more. A black hole has a lot of gravity and pulls these things toward itself. Most black holes are very far away from Earth. This black hole is the closest black hole to Earth scientists have found! It is still many miles away from Earth. Scientists do not know a lot about black holes. Scientists will look for more black holes in space. They think other black holes may be closer to Earth.

WHAT

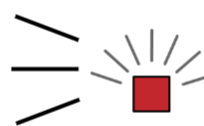

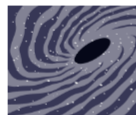

SCIENTISTS FIND BLACK HOLE

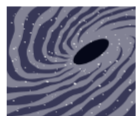

Scientists found a black hole in space.

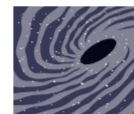

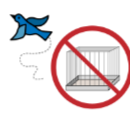

A black hole is very special.

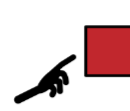

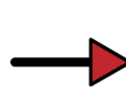

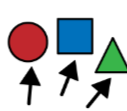

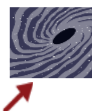

A black hole has a lot of gravity.

Nothing can escape a black hole.

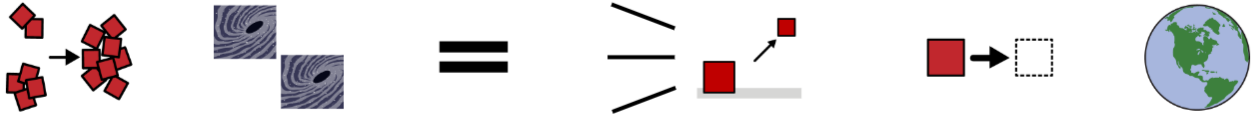

It pulls everything toward itself.

Most black holes are very far away from Earth.

This is the closest black hole to Earth.

But this black hole is still very far away.

Scientists will look for more black holes.

They think other black holes may be closer to Earth.

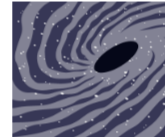

1. **WHAT** did scientists find ?

planet

black hole

moon

2. **WHAT** does a black hole
have a lot of ?

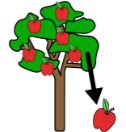

air

water

gravity

3. **WHERE** did scientists find
the black hole ?

desert

ocean

space
