

FLOOD IN MICHIGAN

A Person in a Flooded Street

A city in Michigan called Midland had a lot of rain in May. A river flows through Midland. The rain caused the river to become very full! The river has two dams, called the Edenville Dam and the Sanford Dam. The dams help keep the water in the river. The dams broke on May 19, causing the rivers to flood Midland. Many people left their homes to go to safe places. The river damaged many homes and other buildings in Midland. City leaders and first responders are checking the damage.
