

WILDFIRES CONTINUE

A Wildfire

Dangerous wildfires continue to burn in the western U.S. Wildfires are unplanned fires that spread quickly. Almost 1,000 wildfires have burned in California since August 15. Lightning strikes started many of these wildfires, which have burned more than two million acres in California. Wildfires are burning in other states too, including Utah, Nevada, Arizona, Idaho, Oregon and Washington. Strong winds and hot temperatures are helping the wildfires to spread. Many people have left their homes to be safe from the wildfires. Firefighters are working hard to stop the wildfires and keep people and homes safe. Firefighters hope to stop the wildfires soon.
