1. The total length of each tape diagram represents 1. Decompose the shaded unit fractions as the sum of smaller unit fractions in at least two different ways. The first one has been done for you.

2. The total length of each tape diagram represents 1. Decompose the shaded fractions as the sum of smaller unit fractions in at least two different ways.

Lesson 4:

Decompose fractions into sums of smaller unit fractions using tape diagrams.

3. Draw tape diagrams to prove the following statements. The first one has been done for you.

- 4. Show that $\frac{1}{2}$ is equivalent to $\frac{6}{12}$ using a tape diagram and a number sentence. $\frac{1}{2} = \frac{1}{2} = \frac{1}{12} = \frac{1}{12}$
- 5. Show that $\frac{2}{3}$ is equivalent to $\frac{8}{12}$ using a tape diagram and a number sentence. **7**

$$\frac{2}{3} = 8 \times \frac{1}{12} = \frac{8}{12}$$

6. Show that $\frac{4}{5}$ is equivalent to $\frac{12}{15}$ using a tape diagram and a number sentence.
