

Algebra 1 Bellwork Thursday, January 16, 2014

1. Given $g(r) = -r^2 - 3r$

a) Find $g(5) = -(5)^2 - 3(5)$
 $-25 - 15$
 $= -40$

b) Find $g(-2)$

$-(-2)^2 - 3(-2)$
 $-4 + 6 = 2$

2. Does this relation represent a function?

$(7,13), (-7,8), (4,3), (9,8), (2,3)$

Yes

3. State the domain and range of the relation from Prob. 2

Domain:

$-7, -2, 4, 7, 9$

Range:

$3, 8, 13$

An equation with x inside || symbols is called an **Absolute Value Equation**.

The graph is called a **V-shape**.

4. Graph this function:

$f(x) = 3|x| - 4$

V-shape

x	y
-2	2
-1	-1
0	-4
1	-1
2	2

$3(2) - 4 = 2$
 $3(1) - 4 = -1$

5. Graph this function:

$y = 2x - 5$

$y = mx + b$

X	Y
-2	-9
-1	-7
0	-5
1	-3
2	-1

$3 \overline{) 1}$
 $4 \overline{) 3}$

An equation with only x (no exponent) is called a **Linear Equation**.

The graph is called a **Line**

6. Graph this function: $y = 2x^2 - 3$

X	Y
-2	5
-1	-1
0	-3
1	-1
2	5

An equation with x^2 as the largest exponent is called a **Quadratic Equation**

The graph is called a **Parabola**
