Without graphing tell if each system of equations has One, None, or Many Solutions.

1. $y = 2x - 7$
   $6x + 12y = 24$

2. $y = 4x - 3$
   $8x - 2y = 6$

Solve each system of equations using substitution. Give answer as an ordered pair.

1. $y = 2x - 11$ $y = -6x - 38$

2. $c = -3d + 8$ $4d - 2c = -26$
