

| | | | | | | | |
|--------------------------|-----|-----|-----|-----|-----|-----|-----|
| Respiration(breaths/min) | 50 | 30 | 25 | 20 | 18 | 16 | 14 |
| Heart Rate (beats/min) | 200 | 150 | 140 | 130 | 120 | 110 | 100 |

1. Make a scatter plot of this data.
2. Draw a trend line.
3. Find the equation of this trendline.

4. Use this equation to predict the Heart Rate if the Respiration is 80.

5. Use this equation to predict the Respiration if the Heart Rate is 35.

| | | | | | | | | |
|--------------------------|-----|-----|-----|-----|-----|-----|-----|---|
| Respiration(breaths/min) | 50 | 30 | 25 | 20 | 18 | 16 | 14 | X |
| Heart Rate (beats/min) | 200 | 150 | 140 | 130 | 120 | 110 | 100 | Y |

ANSWERS

1. Make a scatter plot of this data.

2. Draw a trend line.

3. Find the equation of this trendline.

$$\frac{200 - 150}{70 - 30} = \frac{110}{40} \quad y - 150 = 2.75(x - 30)$$

4. Use this equation to predict the Heart Rate if the Respiration is 80.

$$\approx 287.5 \text{ beats/min}$$

5. Use this equation to predict the Respiration if the Heart Rate is 35.

$$-11.82$$

THIS
ISN'T

POSSIBLE!
