

Functions in Algebra 1:

Linear Functions:

EQ: $y = mx + b$

Graph: Line

Absolute Value Functions:

EQ: $y = a|x - h| + k$

Graph: V-Shape

Quadratic Functions:

EQ: $y = ax^2 + bx + c$
or
 $y = a(x - h)^2 + k$

Graph: Parabola

Shapes of Graphs:

Linear Functions: $y = mx + b$

$m > 0$

$m < 0$

Shapes of Graphs:

Quadratic Functions: $y = ax^2 + bx + c$
or $y = a(x - h)^2 + k$

$a > 0$

$a < 0$

Shapes of Graphs:

Absolute Value Functions: $y = a|x - h| + k$

$a > 0$

$a < 0$

Alg 1 Hwk #26

Notes sec 5-2

1. What is a Relation?

Relation: A set of ordered pairs.

A bunch of points.

These points may or may not have a particular relationship

These are both Relations.

2. What is the Domain of a Relation?

Domain: All the **different** x values in numerical order.

3. What is the Range of a Relation?

Range: All the **different** y values in numerical order.

In order without repeating!

Other names for Domain and Range

Domain

- x-coordinates
- Input
- Independent Variable

Range

- y-coordinates
- Output
- Dependent Variable

~~(4, -1), (2, 3), (4, -5), (-2, 6), (1, 3)~~

4. State the Domain and Range of this Relation:

Domain:

Range:

-2, 1, 2, 4

-5, -1, 3, 6

State the domain and range of this relation.

(6, -1), (2, -5), (-1, 7), (9, -4), (1, 3)

Domain:

~~6, 2, 1, 9, 1~~
 $\{-1, 1, 2, 6, 9\}$

3, -4, 7, -5, -1

Range

$\{-5, -4, -1, 3, 7\}$

State the Domain and Range of each Relation

Domain: -5, -4, -2, 1, 3

Range: -3, 0, 2, 3

Domain: -1, 0, 1, 2, 3

Range: -4, -2, 0, 2, 4

These are called Discrete Graphs.

The domain and range can just be listed using all the values of x and y.

You can count the points

These are called Continuous Graphs.

The domain and range **can't** be listed using all the values of x and y because there are an infinite # of points. You must use INEQUALITIES

Domain: $x \geq -3$

Range: $y \leq 3$

Domain: $-1 < x < 3$

Range: $0 < y < 4$
