Graph one period of this function and give the coordinates of each Max and Min in the period and state the equations of each Vertical Asymptote.

1.  $y = -5\text{Sec}9x$

For 2 to 5, simplify each trigonometric expression down to a single trig function or a number.

2.  $\text{Tan}\theta \cdot \text{Sin}\theta + \text{Cos}\theta$

3.  $\frac{1}{\text{Cos}^2x} - \frac{\text{Sin}^2x}{\text{Cos}^2x}$

4.  $\text{Sec}\theta \cdot \text{Csc}\theta - \text{Cot}\theta$

5.  $\frac{\text{Cot}x + \text{Tan}x}{\text{Sec}x}$
