

A cereal manufacturer samples some boxes of cereal which are supposed to weigh 16 ounces. The mean weight of the boxes sampled was 15 with a standard deviation of 1

1. What % of the boxes weighed less than 17 ounces?  $97.5\%$
2. What interval contained 95% of the boxes?  $13-17\text{ oz}$
3. What % of the boxes contained from 13 to 15 ounces?  $47.5\%$
4. A box is rejected if it is more than 2 ounces from the advertised weight. What % of the boxes were rejected.  $16\%$
5. If the company makes 10,000 boxes of cereal a week, how many boxes are rejected?

$$10,000(.16) = 1600$$

Scores on an exam are normally distributed with a mean of 76 and a standard deviation of 10. There were 230 tests taken.

1. How many students scored above 96?  $2.5\%$  of 230  $\approx 6$
2. How many students scored below 66?  $16\%$  of 230  $\approx 37$
3. How many students scored between 56 and 86?  $81.5\%$  of 230  $\approx 187$
4. If a student is selected at random what is the probability that their score was at least an 86?  $16\%$

What if your z-score is 1.25.

What % of the data is below your score?

### Probability Content from $-\infty$ to Z

$$z = 1.25$$

89.44% of the data falls below z-score of 1.25

| Z   | 0.00   | 0.01   | 0.02   | 0.03   | 0.04   | 0.05   | 0.06   | 0.07   | 0.08   | 0.09   |

On a physical fitness test at pilot training school in the Air Force the mean score was 114.6 with a standard deviation of 5.

- a) If your score was a 118 find the percent of trainees that scored below you.

$$75.17\% \quad z = \frac{118 - 114.6}{5} = .68$$

- b) If your score was 125 find the percent of trainees that scored above you.

$$100 - 98.12 = 1.88\% \quad z = \frac{125 - 114.6}{5} = 2.08$$

- c) If your score was 106 find the percent of trainees that scored above you.

$$95.73\% \quad z = \frac{106 - 114.6}{5} = -1.72$$

- d) If your score was 102 find the percent of trainees that scored below you.

$$.59\%$$

- e) To be considered for Top Gun school you must score in the top 3%.

What score did you need on the fitness test?

$$X = 124$$

$$1.88 = \frac{X - 114.6}{5}$$
