

2. Use this graph.

a) Find  $f(-4) = 1$

b) Find  $f(1) = -3$

c) Find  $f(3) = 1$

3. Graph this piecewise function

$$f(x) = \begin{cases} 2|x + 2| - 4 & \text{if } -4 \leq x < 2 \\ -4x + 9 & \text{if } x \geq 2 \end{cases}$$

this is a V-shape that moved 2 left 4 down, opens up and sides have a slope of 2/1. The left endpt is a closed circle and the right endpt is an open circle.

this is a line with a y-int of 9 and a slope of -4. The y-int can't be plotted so you can use a table of values to find a starting point then use the slope to find other points. The best value to use as a starting point is  $x = 2$

x	y
2	1

inbetween these lines you'll see a V-shape

to the right you'll see  $-4x + 9$

2.  $f(x) = \begin{cases} x + 3, & x \leq 0 \\ 3, & 0 < x \leq 2 \\ 2x - 1, & x > 2 \end{cases}$

For each line you could plot the y-intercept and then use slope to find other points. But only connect the points within the domain of each piece. For example, for  $2x - 1$ , only connect the dots starting where  $x=2$  then forever to the right.

Evaluate the following:

$f(-1) = 2$

$f(1) = 3$

3.  $f(x) = \begin{cases} 3x + 5, & x \leq -2 \\ x - 4, & x > 2 \end{cases}$

Evaluate the following:

$f(2) = \text{Does not exist}$

$f(-3) = -4$

$f(0) = \text{Does not exist}$

Graph this piecewise function:

$$f(x) = \begin{cases} -x+2, & \text{if } x \leq -2 \\ 2|x-1|-2, & \text{if } -2 < x < 1 \\ -2x+4, & \text{if } x \geq 1 \end{cases}$$

V-shape that has moved 1 right 2 down, opens up, sides have a slope of 2/1

$$\begin{array}{c|c} x & y \\ \hline 2 & 0 \end{array}$$

Find the starting point then use the slope

Find the starting point then use the slope

Graph this piecewise function:

$$f(x) = \begin{cases} 3, & \text{if } x \leq -2 \\ x^2 - 2, & \text{if } -2 < x < 2 \\ 2, & \text{if } x \geq 2 \end{cases}$$

$$\begin{array}{c|c} x & y \\ \hline -2 & 2 \\ -1 & -1 \\ 0 & -2 \\ 1 & -1 \\ 2 & 2 \end{array}$$

For a shape you're not familiar with you can use a table of values, plot them and just connect them

Write the rule for this piecewise function:

$$f(x) = \begin{cases} -1 & \text{if } x < 0 \\ \frac{1}{2}x + 2 & \text{if } x \geq 0 \end{cases}$$

Write the rule for this piecewise function:

$$f(x) = \begin{cases} x - 2 & \text{if } x \leq 1 \\ 2x - 1 & \text{if } x > 1 \end{cases}$$

Write the rule for this piecewise function:

$$f(x) = \begin{cases} \frac{1}{2}x - 1 & \text{if } x \leq -2 \\ x + 1 & \text{if } -2 < x \leq 2 \\ 4 & \text{if } x > 2 \end{cases}$$
