

You can now finish Hwk #21

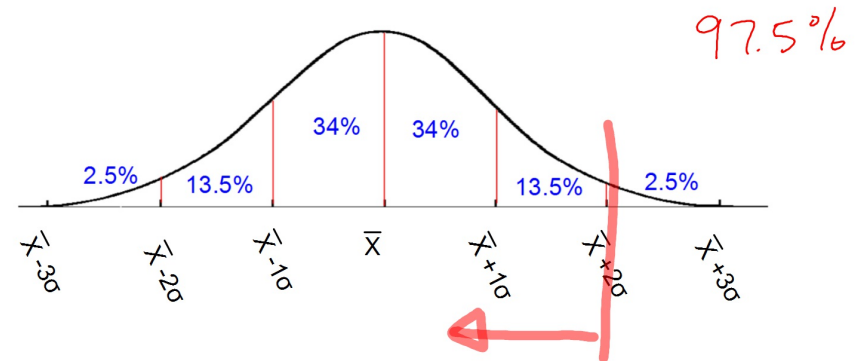

Sec 12-7

due tomorrow

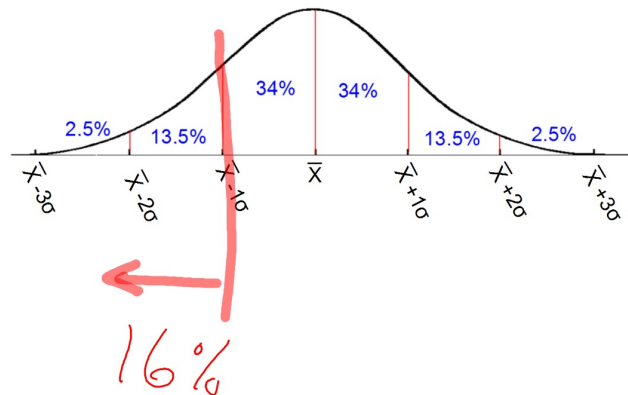

Page 695

Problems 5, 9-15, 18, 20-22, 27

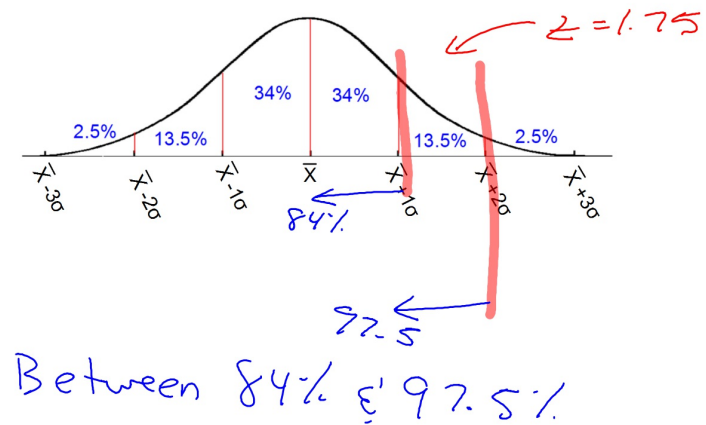

If your z-score is 2, what percent of data is below your score?

If your z-score is -1, what percent of data is below your score?

If your z-score is 1.75,
what percent of data is below your score?

Standard Normal Probabilities

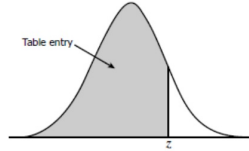

Table entry for z is the area under the standard normal curve to the left of z .

Find the % of data below the following z-scores.

1. $z = 1.39$

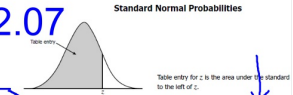

91.77%

2. $z = 2.07$

98.08%

There are Normal Distribution tables for negative z-scores as well.

3.51% is below $z = -1.81$

Standard Normal Probabilities

Table entry for z is the area under the standard normal curve to the left of z .

The mean score on the ACT is 18 with a standard deviation of 6.

1. You got your results back and scored a 30. You did better than what % of those who took the test?

2. If your ACT score was 27 you did better than what % of those who took the test?

$$z = \frac{27 - 18}{6} = 1.5 \Rightarrow 93.32\%$$

3. You did better than what % if you score was 20?

$$z = \frac{20 - 18}{6} = .33 \Rightarrow 62.93\%$$

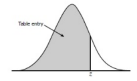

Table entry for z is the area under the standard normal curve to the left of z .

Students who score in the top 10% of an achievement test qualify for a scholarship.

The test had a mean of 86 and a standard deviation of 7.

1. If you had a score of 88 you did better than what % of those who took the test?

$$z = \frac{88 - 86}{7} = 0.29$$

(61.41%)

Students who score in the top 10% of an achievement test qualify for a scholarship.

The test had a mean of 86 and a standard deviation of 7.

2. If you had a score of 91 what % of those who took the test did better than you?

$$z = \frac{91 - 86}{7} = 0.71 \quad 76.11\% \text{ is below}$$

$$\text{ABOVE} = 100 - 76.11\% = 23.89\%$$

Students who score in the top 10% of an achievement test qualify for a scholarship.

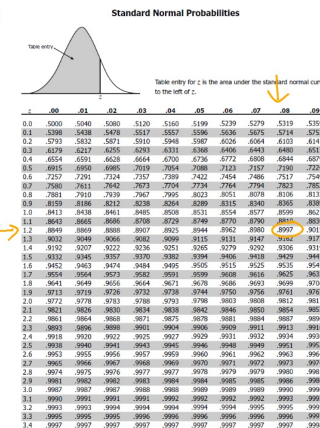

The test had a mean of 86 and a standard deviation of 7.

3. You need to get at least what score to qualify for the scholarship?

Top 10% means 90% is below $\rightarrow z = 1.28$

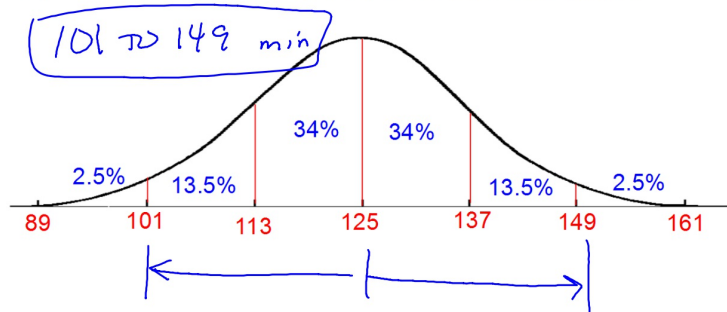

$$1.28 = \frac{x - 86}{7}$$

$$x = \text{at least } 95$$

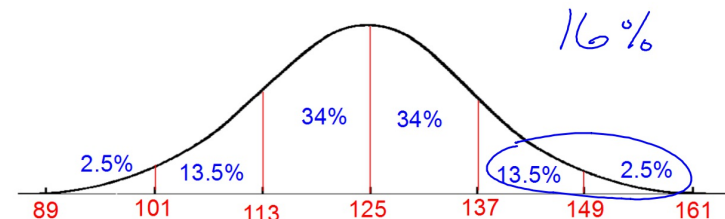

1. The amount of time it takes a group of students to finish a standardized test is normally distributed with a mean of 125 minutes and a standard deviation of 12 minutes. There were 420 students in the group.

a) What is the range of times for which 95% of the students will finish?

b) What percent of the students took more than 137 minutes to finish the test?

c) What percent of the students took between 101 and 125 minutes to finish the test?

47.5%

d) How many students finished the test faster than 113 minutes?

$$(.16)(420) = 67$$
