

What is the graph doing as the number of days increases?

It continues to increase but slows down and begins to level out.

Agile Mind Website: Topic 1 - Exploring - Infinite pg6

What must be true about successive terms for the graph of partial sums to start approaching a limiting value?

Successive terms must start to become smaller and smaller, thus affecting the total less and less.

Agile Mind Website: Topic 1 - Exploring - Infinite pg11

Which are the only types of Infinite Series that will **CONVERGE**?

Geometric, if...

$|r| < 1$   Another way to think if this is that  $r$  must be between -1 and 1 but not zero.

Formula:  
Sum of a **FINITE**  
Geometric Series

$$S_n = t_1 \left( \frac{1 - r^n}{1 - r} \right)$$

Formula:  
Sum of an **INFINITE**  
Geometric Series

$$|r| < 1$$

$r$  is between -1 and 1  
but not zero

$$S = t_1 \left( \frac{1 - r^\infty}{1 - r} \right)$$

Since  $|r| < 1$ ,  $r^\infty$  approaches zero.

The formula becomes:

$$S = t_1 \left( \frac{1 - 0}{1 - r} \right)$$

$$S = t_1 \left( \frac{1}{1 - r} \right) = \boxed{\frac{t_1}{1 - r}}$$

Find this sum, if it exists.

1.  $11 + 4 + -3 + -10 + \dots$  Infinite series

$\begin{array}{ccccccc} & \nearrow & & \nearrow & & \nearrow & \\ & -7 & & -7 & & -7 & \end{array}$

Arithmetic  $d = -7$

Since this is an Infinite Arithmetic series it has NO SUM.

Find this sum, if it exists.

2.  $8 + 16 + 32 + 64 + 128 + \dots$  infinite series

$\begin{array}{ccccccc} & \nearrow & & \nearrow & & \nearrow & \\ & \times 2 & & \times 2 & & \times 2 & \end{array}$

Geometric  $r = 2$

Since this is an Infinite Geometric series and  $|r| > 1$ , this series has NO SUM

Find this sum, if it exists.

3.  $7 + 10 + 13 + 16 + \dots + 34$  Since this is a FINITE series, it must have a sum.

$\begin{array}{ccccccc} & \nearrow & & \nearrow & & \nearrow & \\ & +3 & & +3 & & +3 & \end{array}$

Arithmetic with  $d=3$

Sum of Finite Arithmetic Series:

$$S_n = \frac{n}{2} (t_1 + t_n) \quad \begin{array}{l} t_1 = 7 \\ t_n = 34 \end{array}$$

must find  $n$  (# terms) using explicit formula

$$t_n = t_1 + d(n-1)$$

$$34 = 7 + 3(n-1)$$

$$27 = \frac{3}{3}(n-1)$$

$$9 = n-1 \quad n = 10$$

$$S_{10} = \frac{10}{2} (7 + 34) = 5(41) = 205$$

Find this sum, if it exists.

4.  $1250 + 250 + 50 + 10 + \dots$  infinite Series

$\begin{array}{ccccccc} & \nearrow & & \nearrow & & \nearrow & \\ & \times 1/5 & & \times 1/5 & & \times 1/5 & \end{array}$

Geometric  $r = 1/5 = 0.2$

$$S = \frac{t_1}{1-r} = \frac{1250}{1-0.2} = \frac{1250}{0.8}$$

Since this is an Infinite Geometric series with  $|r| < 1$ , this series has a sum:

$$S = 1562.5$$

Find this sum, if it exists.

5.  $\sum_{n=1}^{\infty} 24 - 3(n-1)$

Infinite series

Arithmetic

Since this is an Infinite Arithmetic Series, there is **NO SUM**.

Find this sum, if it exists.

6.  $\sum_{n=1}^{\infty} 8(-0.2)^{n-1}$

Infinite series

Geometric series

common ratio = -0.2

Since this is an Infinite Geometric Series with  $|r| < 1$ , this series has a sum:

$$S = \frac{t_1}{1-r} \quad t_1 = 8$$

$$r = -0.2$$

$$= \frac{8}{1-(-0.2)} = \frac{8}{1.2}$$

$$S = 6.\bar{6} = 6\frac{2}{3}$$

Find this sum, if it exists.

7.  $\sum_{n=1}^{\infty} 18(1.01)^{n-1}$

Infinite Series

Geometric

common ratio = 1.01

This series has **NO SUM** because even though it is an Infinite Geometric series  $|r|$  is not less than 1.

Hwk #7:

Practice Problems - Infinite Series

and

Due: Tomorrow 9/18

More Practice pages 9-13,

Agile Mind website - Topic 1: Arith & Geo Seq & Series

Test over Topic 1 - Thursday:

Part 1: Paper/Pencil - Use the review I gave you

Part 2: Online problems - Review using More Practice and Extra Practice on website.
