Use the figure at the right and the given information to determine if there are any parallel lines. If yes, state which lines are parallel and give a reason.

1. $\angle 1 \cong \angle 5$

$a \parallel b$ corr L's \cong

2. $\angle 9$ supp with $\angle 5$

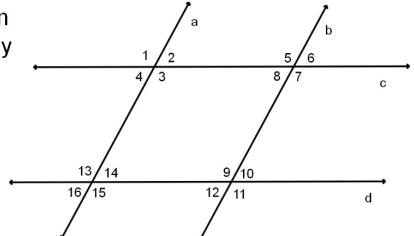

No parallel

3. $\angle 6 \cong \angle 14$

No parallel

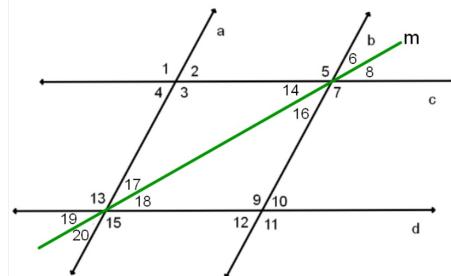

5. $\angle 1$ supp with $\angle 4$

No parallel

4. $\angle 10 \cong \angle 16$
 $a \parallel b$ Alt ext L's \cong

Name the parallel lines and the transversal that form each pair of angles then name the angles.

6. $\angle 8 & \angle 18$

$c \parallel l$ corr L's
m is the transv.

7. $\angle 7 & \angle 4$

$a \parallel b$ SSE
trans C

9. $\angle 17 & \angle 16$

$a \parallel b$ trans m
alt int L's

10. Find the measure of one interior angle of a regular 24-gon.

$$(24-2)180 = \frac{3960}{24} = 165^\circ \quad \begin{array}{r} 360 \\ \div 24 \\ \hline 15^\circ \end{array}$$

11. Find the number of sides of a regular polygon if the measure of one interior angle is 135°

$$n \cdot \frac{(n-2)180}{n} = 135 \cdot n \rightarrow \frac{180n - 360}{180n} = \frac{135n}{180n}$$

$$-360 = -45n$$

12. Can a polygon have a sum of its interior angles equal to 4200° ?

$$\frac{(n-2)180}{180} = \frac{4200}{180}$$

$$n-2 = 23.33$$
