

### Placing a figure on the coordinate plane in Standard Position

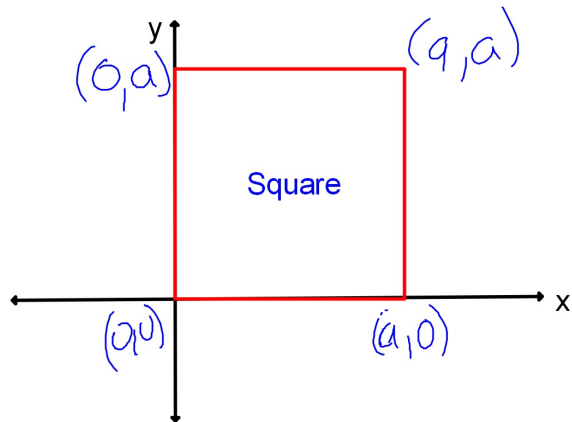

- One vertex is at the origin
- One side is on the pos x-axis

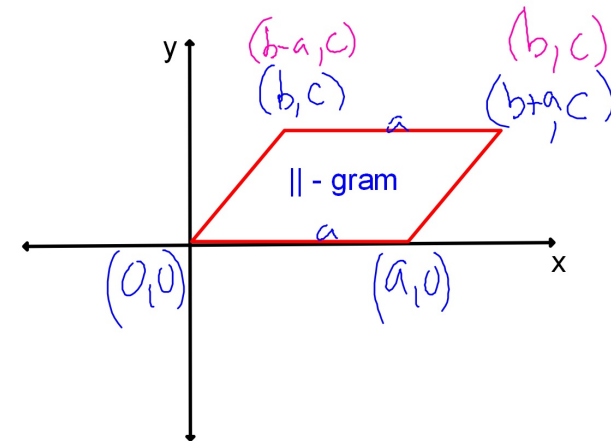

Use the fewest number of variables possible to label the coordinates of all four vertices.

Use the fewest number of variables possible to label the coordinates of all four vertices.

Use the fewest number of variables possible to label the coordinates of all four vertices.

Use the fewest number of variables possible  
to label the coordinates of all four vertices.
