

## Prism:

- A polyhedron with exactly two congruent, parallel faces, called BASES.
- Other faces are called LATERAL FACES.

Base

Lateral Face

Lateral Edge

Vertex

## Triangular Prism

Height of the Prism

Base of the Prism

Height of the Base

Base of the Base

You name a prism by the shape of its base.

Pentagonal Prism

Identify the two bases of this prism and name it.

Hexagonal  
Prism

How many lateral faces  
are there?

Right Prism: Lateral Faces are Rectangles  
Lateral edge is an altitude. height

Oblique Prism:

Find the total surface area of this rectangular prism.

Surface Area: SA

**2 Bases + 4 Lateral Faces**

SA:  $2B + \text{Lateral Area}$

Using a net to find SA of a Prism:

Using a net to find SA of a Prism:

Height of the Prism 7

$$\text{LATERAL AREA} = (\text{Perimeter of the Base})(\text{Height of the Prism})$$

Lateral Area: Sum of areas of lateral faces.

$$\text{LA} =$$

$$\text{LA} = ph$$

$$\text{LA} = (\text{perimeter of the Base})(\text{height})$$

Surface Area = Lateral Area + Area of Bases

$$SA = LA + 2B = 120 + 2(24) = 168 \text{ in}^2$$

B = area of a base

$$B = \frac{1}{2}bh = \frac{1}{2} \cdot 8 \cdot 6 = 24$$

$$LA = ph = (8+6+10)(5) = 120$$

Find the SA of this regular hexagonal prism to the nearest tenth.

$$SA = LA + 2B$$

$$LA = ph = (6+6+6+6+6+6)(10) = 360$$

$$B = \frac{1}{2}ap = \frac{1}{2}(6\sqrt{3})(3\sqrt{3}) = 27$$

$$SA = 360 + 2(27) = 414$$

Find the surface area of this trapezoidal prism.

$$LA = ph = (12+8+6+6)(15) = 480$$

$$2B = 2\left(\frac{1}{2}(12+8)(4)\right) = 80$$

$$SA = LA + 2B = 480 + 80 = 560 \text{ in}^2$$

Find the surface area of this Pentagonal Prism.

$$LA = ph = (5+8+8+8+8)(20) = 800$$

$$2B = 2\left(\frac{1}{2}ap\right) = 2(20) = 40$$

$$SA = LA + 2B = 800 + 40 = 840$$
