

The circle is inscribed in the quadrilateral.
Find the value of x .

Diameter:

Segment connecting two points on the circle that passes through the center.

Chord:

Segment connecting two points on the circle.

Which statement is true:

1. All Chords are Diameters.
2. All Diameters are Chords. ✓

Draw and name a Diameter

\overline{RC}

Draw and name a Chord

\overline{MT}

Place a point on your paper and label it Q.

Construct Circle Q.

Draw two chords that are equal in length and label them AB and CD.

Draw radii to create angles $\angle AQB$ and $\angle CQD$

Measure these two central angles.

\cong

What conclusion can you make?

$2 \cong \text{chords} \rightarrow 2 \cong \text{central } \angle's$

What is true about arc \widehat{AB} and \widehat{CD} ?

$2 \cong \text{chords} \rightarrow 2 \cong \text{arcs}$

We already know that the measure of an arc is equal to the measure of its central angle.

Therefore, congruent central angles have congruent arcs.

Theorem 12-4

Within a circle or in congruent circles

- (1) Congruent central angles have congruent chords.
- (2) Congruent chords have congruent arcs.
- (3) Congruent arcs have congruent central angles.

Central Angle: Angle whose vertex is the center of a circle.

Inscribed angle: Angle whose vertex is a point on the circle.

Sides of the angle
are chords

Draw another circle and label the center P.

Draw a central angle of 50° and label the points on the circle A and C.

What is the measure of arc \widehat{AC} ?

Pick another point on the circle but not on arc \widehat{AC} . Label this point B. Find the measure angle $\angle ABC$.

What do you think is the relationship between an inscribed angle and its intercepted arc?

the inscribed angle is half of the arc.

Theorem 12-9

Inscribed Angle Theorem

The measure of an inscribed angle is half the measure of its intercepted arc.

$$m\angle B = \frac{1}{2}m\widehat{AC}$$

State if each angle is an inscribed angle.

If it is, name the angle and the intercepted arc.

1)

Yes; $m\angle BAC$, \widehat{BC}

2)

No

3)

Yes; $m\angle WXV$, \widehat{WV}

4)

No

Find the measure of each ?.
