Essay Questions

1. How has farming in Michigan changed since the days of the pioneers?
Think of crops, equipment, and number of farmers.

2. The Asian Carp is making its way into the Great Lakes. These fish came from Asia and are eating up the food supply of Michigan's fish. The Emerald Ash Borer, is a beetle, responsible for the destruction of many Ash Trees in Michigan. The chart below shows the threat to Michigan and how it is damaging Michigan's natural resources.

Current Threat	How it is damaging Michigan's natural resources?
Asian Carp	Eating up food supply for the Michigan fish, therefore the population will become smaller and species of fish may die out
Emerald Ash Borer	The Emerald Ash Bore infests Ash trees, therefore killing millions of Michigan's trees. Therefore, the population of the Ash tree has decreased.

Think about past threats to Michigan's natural resources. Name two past threats to Michigan's natural resources and describe how they damaged Michigan's natural resources.
