

## Periodic Functions Practice

Determine whether each function *is* or *is not* periodic. If it is, find the period.

Find the period and amplitude of each function.

Sketch a graph of the following functions.

|                          |  |
|--------------------------|--|
| 1) $y = 2\sin\theta$     | 2) $y = -\sin 3\theta$                       |
| 3) $y = -2\sin\pi\theta$ | 4) $y = 4\sin\left(\frac{1}{2}\theta\right)$ |

**SLOT Problems:** Use the two-way table to find the following probabilities

| Concession Stand Sales |      |       |          |       |
|------------------------|------|-------|----------|-------|
|                        | Soda | Water | No Drink | Total |
| Hot Dog                | 50   | 62    | 46       | 158   |
| Pizza                  | 120  | 58    | 4        | 182   |
| No Food                | 30   | 20    | 10       | 60    |
| Total                  | 200  | 140   | 60       | 400   |

a) Randomly selecting pizza and water sales.

b) Randomly selecting a sale of no food and a soda.

c) Randomly selecting a sale of water, given that a hotdog was sold.

d) Randomly selecting a sale of pizza, given that a soda was sold.
