HONORS – Discovering the Patterns for Special Right Triangles

You may recall hearing or working with the *Pythagorean Theorem* in middle school...

What does the *Pythagorean Theorem* allow us to do?

find missing sides of right triangles

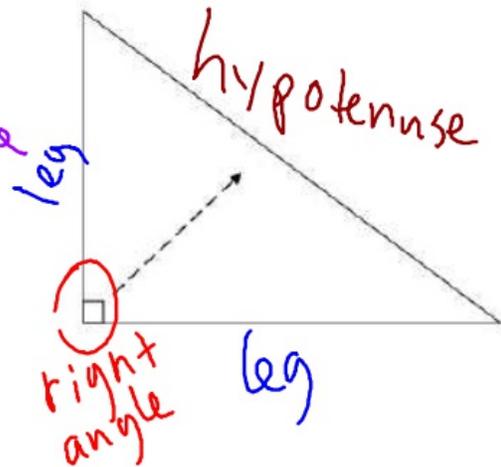

Pythagorean Theorem:

$$a^2 + b^2 = c^2$$

Recall the Parts of a Right Triangle:

- Right Angle: 90° angle
- Legs: Sides adjacent to the right angle
- Hypotenuse: longest side

- Side opposite of the right angle.
- longest side

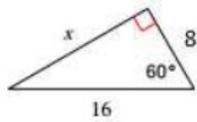

Quick Review Problems

DIRECTIONS: Use the Pythagorean Formula to find the missing side of the right triangle.

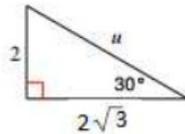

$$5^2 + 12^2 = c^2$$
$$25 + 144 = c^2$$
$$\sqrt{169} = \sqrt{c^2}$$
$$13 = c$$
$$4^2 + b^2 = 5^2$$
$$16 + b^2 = 25$$
$$b^2 = 9$$
$$b = 3$$
$$10^2 + y^2 = 14^2$$
$$100 + y^2 = 196$$
$$y^2 = 96$$
$$y = 4\sqrt{6}$$

Use the Pythagorean Theorem to determine the missing side. Leave the answer in radical form! (SL=Short Leg, LL=Long Leg)

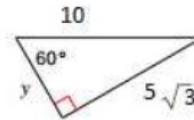

Work

$$\begin{aligned} \text{SL} &= 8 \\ \text{LL} &= 8\sqrt{3} \\ \text{H} &= 16 \end{aligned}$$

Work

$$\begin{aligned} \text{SL} &= 2 \\ \text{LL} &= 2\sqrt{3} \\ \text{H} &= 4 \end{aligned}$$

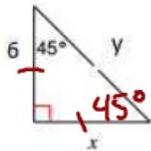

Work

$$\begin{aligned} \text{SL} &= 5 \\ \text{LL} &= 5\sqrt{3} \\ \text{H} &= 10 \end{aligned}$$

Using the answers for the triangles above, what relationships can you write using the sides of a special right triangle 30°-60°-90°

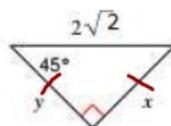

$$\begin{aligned} 2 \cdot \text{SL} &= \text{H} \\ \text{SL} \cdot \sqrt{3} &= \text{LL} \end{aligned}$$

Use Pythagorean Theorem to determine the missing side. Leave the answer in radical form.

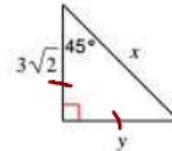

Work

$$\begin{aligned} \text{L} &= 6 \\ \text{L} &= 6 \\ \text{H} &= 6\sqrt{2} \end{aligned}$$

Work

$$\begin{aligned} \text{L} &= 2 \\ \text{L} &= 2 \\ \text{H} &= 2\sqrt{2} \end{aligned}$$

Work

$$\begin{aligned} \text{L} &= 3\sqrt{2} \\ \text{L} &= 3\sqrt{2} \\ \text{H} &= 6 \end{aligned}$$

Using the answers for the triangles above, what relationships can you write using the sides of a special right triangle 45°-45°-90°

$$\begin{aligned} \text{legs are congruent} \\ \text{H} &= \text{L} \cdot \sqrt{2} \end{aligned}$$
