

# What Lives in the Desert?

by Rachelle Kreisman

A desert is a dry place with little rain. How little? A desert gets less than ten inches of rain each year. Some deserts are hot. A few can be cold. A desert is a habitat. A habitat is a place where animals and plants live.

Hot deserts are home to many kinds of living things. Animals living there include owls, snakes, lizards, and coyotes. Another hot desert animal is the kangaroo rat. It sleeps underground during the day, when the weather is hot. The kangaroo rat comes out at night, when it is cooler. Kangaroo rats get the water they need from food.

They eat mostly seeds.

Some plants live in the hot desert. Only a few kinds of trees and bushes can survive there. One of the most common desert plants is the cactus. The cactus collects and stores water in its stem. Sharp spines protect most cacti from animals.
