

E. Decide how you will test your prototype and describe the procedure you will use.

F. Illustrate or diagram your design and write clear, easy to understand, step by step, directions that describe what you are going to do to build your prototype. Keep your steps organized by numbering them. A lot of detail is expected here in order to help you think through any possible challenges that you may face when you make your prototype so your response will be more detailed than in part B.

Illustration or diagram-
