Pirate Squeeze

Numbers

1-100

Pirate Squeeze Directions

Place one pirate at each end of the number line.

| 93 | 94 | 95 | 96 |

To begin playing, say: *I'm thinking of a number between 0 and 100.*

Children then take turns guessing a number.

- If the number is too large, say: "*Your number is too large*, and move the right-hand pirate to cover that number."

- If the number is too small, say: "*Your number is too small,* and move the left-hand pirate to cover that number.

Continue with guesses until the correct number has been "squeezed" between the two pirates.

The child who guesses the correct answer thinks of the next number and whispers it to you. That child then responds to each guess with "too large" or "too small" and with your help if necessary, moves the pirates.

As children become familiar with the game, they will be able to move the pirates, and play the game independently during math workshop.
