

# ANIMALS IN NATIONAL PARKS

A Black Bear

Many people are traveling less now because of the coronavirus.

People are not visiting U.S. national parks, and some national parks are closed. Animals are still living in the national parks, and park rangers are still working in the national parks. Park rangers are seeing more animals now because visitors are not in the parks! Some park rangers work in Yosemite National Park in California. Park rangers here are seeing more black bears, coyotes and bobcats. They see some animals walking down streets through the park! The park rangers enjoy seeing the animals.
