

DANGEROUS STORMS

Damage From the Storm

Dangerous storms hit states across the U.S. Southeast on April 12.

The storms brought powerful wind, hail and tornadoes to states including Louisiana, Mississippi, Alabama, Georgia, Tennessee and South Carolina. Many people had to break current social distancing rules to huddle together in community shelters. They wore face masks to protect themselves from the coronavirus. The storms damaged homes and businesses and knocked down trees and electric lines. Many people have no electricity. The storms brought floods and mudslides to some areas too. Meteorologists say more storms may be coming. People are watching weather reports so they can prepare and be safe.
