

# Bunny in the Garden

Name:

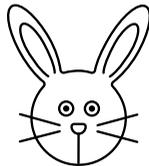

Date:

One day, a hungry little bunny hopped into a garden. There were many new vegetables in the garden she had never tasted before. She was curious. The little bunny hopped over to the green beans and took a bite. "Yuck!" she said. She didn't like green beans. Then, she hopped into a patch of squash. She took a bite. "Not bad," she said as she continued hopping. Finally, she hopped into the carrot patch. She saw the bright green tops sticking out of the ground. She had eaten carrots before, so she knew what to do! She used her teeth to pull the carrot out of the ground. It was crunchy and orange. She ate the whole thing! With a full tummy, the little bunny hopped out of the garden and back home for a nap.

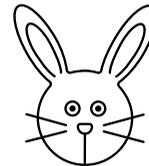

**Who was hungry?**

**The carrots**

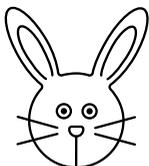

**The little bunny**

**The gardener**

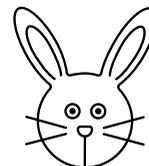

**Where did the little bunny find food?**

**In a store**

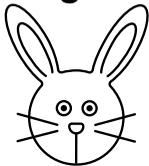

**In a kitchen**

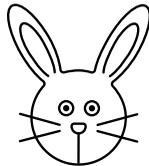

**In a garden**

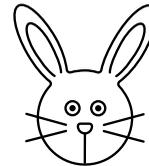

**What vegetable didn't the little bunny like?**

**Green beans**

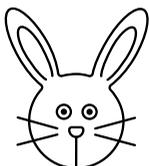

**Squash**

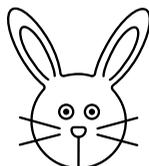

**Carrots**

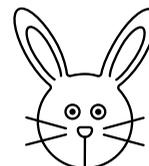

**When did the little bunny go back home?**

**Before she ate a carrot**

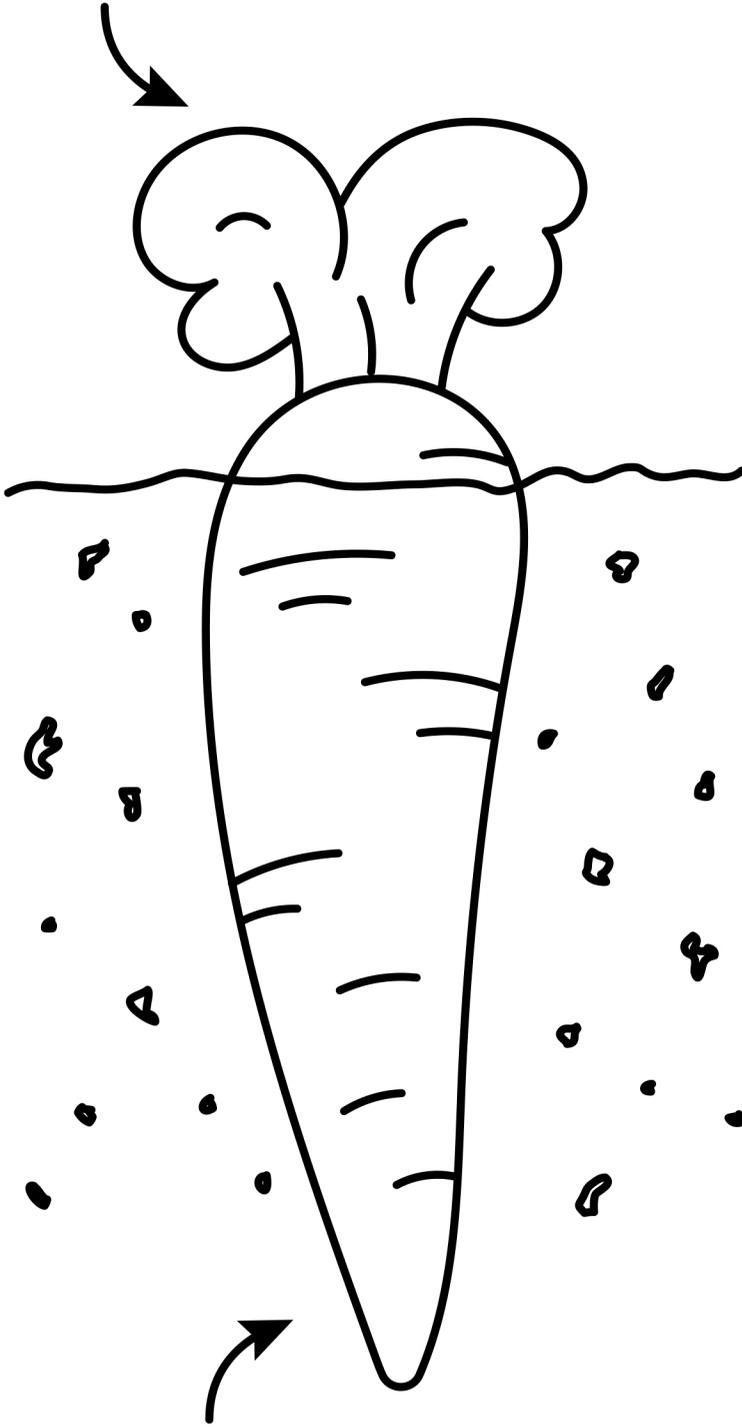

**After she ate a carrot**

**On Monday night**

# Let's Learn About Carrots!

**plant**

**root**

## Carrot Facts

- Carrots have two parts: the plant and the root. People usually eat the root. Although not as common, you can also eat the leafy plant portion.
- The plant is green and sticks out of the ground. The root grows underground.
- Carrots can be eaten in different ways. They can be eaten raw or cooked. They can be dipped in dressing, boiled in soups, or mashed in a casserole. They can even be juiced!
- The root portion of carrots are usually orange, but they can also be other colors! They can be purple, white, or yellow.
- Beta-carotene is the pigment that makes carrots orange. If you eat too many carrots, your skin can even start turning orange! Don't worry, this is a harmless condition and your skin will go back to its usual color when you stop eating so many carrots.
- The human body converts beta-carotene into vitamin A. Vitamin A helps you have healthy eyes, bones, and skin.

# Let's Learn About Rabbits!

## Rabbit Facts

- Rabbits are small mammals that live in groups.
- Rabbits can live in a variety of different habitats. They can live in forests, meadows, grasslands or underground burrows.
- A female rabbit is called a doe, a male rabbit is called a buck, and a baby rabbit is called a kit.
- Rabbits have soft fur and long ears. Rabbits are herbivores, which means they eat plants.
- Rabbits live for about 10 years. Rabbits can live in the wild or be kept as a pet.
