

1 unit = 200 ft

Nadine and Yasmeen want to take a trip to the mall to buy a toy for a friend who is moving. Yasmeen printed a layout of the mall to map out their route. Use the map to answer the following questions. The black dots represent the doors to the mall or stores. You must use straight lines to answer the questions. Show all computations that lead up to your solutions.

Nadine goes to the mall before Yasmeen to meet up with her later. Nadine enters the mall at the East entrance to go to the Shoes Express. After looking around for a while at the Shoes Express Yasmeen calls her to make arrangements to meet. Since Yasmeen is at the West entrance, they decide to meet in front of the Print Shop. From there they go to the Toy Store to get the toy for their friend. After they got the toy, Nadine and Yasmeen decided to go grab something to eat at the food court on the east side of the mall. After they eat they leave the mall through the South entrance. Which of the two girls completed a longer distance and how many more ft. did she have to walk?
