### Activity 2

A'

- Place your MIRA between the two circles above and move it until the image of one circle maps onto the other circle.
- Use the pencil against the back of the edge of the MIRA to sketch the line of reflection between the two circles. Label that *line c*.
- Find the line of reflection for each pair of congruent shapes. Label the lines *line s* for squares, *line r* for rectangles, and *line t* for triangles.
- For the triangle, square and rectangle, label the corresponding vertices on the image, so A maps to A' (A prime), B maps to B' etc.
- ☼ e) Use a ruler, connect each pair of corresponding vertices with a line segment. What do you notice about the family of line segments for each shape?
- ☼ f) Which pair of shapes could not be mapped? Why do you think that is so?
